WEB DEVELOPMENT ACTIVITY-BASED LEARNING

FINAL PROJECT REPORT

Student Name	_____
Roll Number	_____
Branch / Section	_____
Course	Web Development

Submitted as part of the Web Development Activity-Based Learning assignment.

1. Introduction

This report presents three website interfaces developed for the Web Development Activity-Based Learning assignment: a Personal Portfolio Website, a Student Academic Dashboard, and a Bakery and Cake Shop Website.

2. Objectives

• Structure webpage content using HTML.
• Style layouts, typography, colors, and components using CSS.
• Organize information into clear sections.
• Present responsive website interfaces.
• Publish the projects using GitHub Pages.

3. Technologies Used

HTML5: webpage structure and content.
CSS3: styling, layout, spacing, and responsive presentation.
GitHub: source-code repository and version hosting.
GitHub Pages: deployment of the static websites.

4. Selected Case Studies

4.1 Personal Portfolio Website

A single-page portfolio interface with profile, skills, projects, and contact sections.

Live website: https://koneruravivarma2008-ctrl.github.io/WEB-DEVELOPMENT-ABL/WEB-DEVELOPMENT/01_personal_portfolio/

4.2 Student Academic Dashboard

A dashboard presenting student academic information, including attendance, semester results, subject performance, and examination schedule.

Live website: https://koneruravivarma2008-ctrl.github.io/WEB-DEVELOPMENT-ABL/WEB-DEVELOPMENT/02_student_dashboard/

4.3 Bakery and Cake Shop Website

A bakery interface showcasing products, prices, featured items, offers, and store contact information.

Live website: https://koneruravivarma2008-ctrl.github.io/WEB-DEVELOPMENT-ABL/WEB-DEVELOPMENT/03_bakery_shop/

5. Repository Organization

The source files are arranged in separate folders, one for each case study:

```
WEB-DEVELOPMENT/
01_personal_portfolio/
02_student_dashboard/
03_bakery_shop/
```

6. Deployment

The websites are published through GitHub Pages. The live links in this report were checked and returned the corresponding project pages. The repository contains the project source code and deployment workflow.

7. Conclusion

These case studies demonstrate HTML and CSS applied to three different website types: a personal profile, an academic dashboard, and a bakery website. The projects are organized in GitHub and published as live webpages.
